

Complexe Hotelier La Barcarolle, Prangins

SHORT DESCRIPTION

The cultural and sporting facilities of the village, glorified by the presence of Prangins Castle, have been strengthened in recent years by the creation of a recreational area near the port, to which has been added the realization of a new 4-star hotel complex.

THE PROJECT

The hotel offers modern comfort within a shell that demonstrates its connection to traditional values, which are expressed through the choice of materials and the construction techniques used. The reinforced concrete load-bearing structure, covered by a pitched roof with tiled roofing and perimeter insulation, is a classic option for the region. Dormer windows and wooden balconies lend the building a touch of local tradition.

SERVICES IN DETAIL

The building of the hotel complex is divided into three different volumes, each of which fulfills a specific function due to its shape. The central volume houses the reception area, a lounge and a bar as well as a multi-purpose room that can be set up for seminars. To the east, two restaurant rooms open out onto large terraces facing the lake. In the west wing, three suites and 36 double rooms are spread over three levels. Some of them can be combined as required.

Each room faces the park and has a balcony or terrace so that guests can enjoy the tranquillity of the grounds, which are bordered by a small forest and connect the hotel to the lake. A parking lot, a swimming pool and the space reserved for future tennis courts complete the exterior of this complex, which meets the high standards of a hotel of this category in all respects.

Construction volume: 15'300^{m3}
