

# Construction of a new crude salt storage facility

### **SHORT DESCRIPTION**

Implenia Tesch GmbH constructs a new crude salt storage facility for esco in Rheinberg.

#### **THE PROJECT**

In July 2015, Implenia Tesch GmbH won the contract to construct the new Saline crude salt storage facility as a replacement for the dilapidated storage hall.

## Type and scope of work:

- Once the excavation pit had been created, the solid construction work was begun in order to build the withdrawal tunnel, the silo cellar, and the silo wall and base slab.
- Following on from this, the silos measuring 18.6 m high and with a diameter of 15 m were constructed using a quick sliding formwork technique.
- In this process, some 2,000 m³ of soil were moved and approximately 220 t of reinforcement, 4,200 m² of formwork and 1,400 m³ of concrete were installed.

- An especially notable achievement was completing all of this work within the stipulated construction period of just 15 weeks.
- The drainage and strengthening work was then carried out once this was done.

# **FACTS**

Location	Karlstraße 80, Rheinberg , Germany
Status	completed
Construction volume (value of our services)	1.25 M EUR
Start of construction	June 2015
Completion	October 2015
Contracting entity	esco - european salt company GmbH & Co. KG
