ONU, Palais des nations Bâtiment H

SHORT DESCRIPTION

Construction of a new administrative building within the Palais des Nations.

THE PROJECT

6-storey programme for offices, meeting rooms, snack areas. The new building offers space for around 1,500 employees and fully supports the strategies for flexible workplaces in an environment that promotes the well-being of employees. The latest technologies such as modern office IT solutions, video conferencing systems and meeting room reservation systems ensure an efficient and high-performance workplace.

SERVICES IN DETAIL

Building H was designed as a sustainable, healthy, highly efficient and economical building. By minimising waste and saving energy, the building benefits not only its occupants but the global community as a whole. The building has been designed to achieve a level of performance equivalent to the LEED Gold standard. LEED is the world's most widely used green building rating system and a globally recognised symbol of successful sustainability, providing a solid framework for the continuous optimisation of the building's infrastructure and energy requirements. The building consists of a wood-concrete composite construction and utilises the thermal mass of the concrete floors for heating and cooling. It is an "active floor slab" that stores energy and thus reduces the peak energy demand for heating and cooling. Building H "connects" efficiently to the existing central heating system of the Palais des Nations and uses the Genilac water cooling system of Lake Geneva to cool the building.

Building volume: 120,000 m^3

FACTS

Location	Parc de l’Ariana - 8, Av. de la Paix 14, 1211 , Genève , Switzerland
Status	completed
Start of construction	June 2018
Completion	June 2021
Architect	SOM / Burckhardt+Partner

SUSTAINABILITY

LEED Gold Certified
