p44 - Gemeinsam im Grünen

SHORT DESCRIPTION

Intergenerational living at Vogelkamp.

THE PROJECT

Vogelkamp is a development area in the south-west of Hamburg that creates living space close to nature in a metropolitan region. Adjacent to the Moorgürtel nature reserve, not far from the Harburg mountains, a village-like residential feeling is being created without sacrificing urbanity.

The competition entry was a synthesis of the single-family, terraced and multi-family houses that characterize the district. A material-efficient construction method is the basis for the design of the ensemble. The small-scale structure makes reference to the outside space and the neighboring buildings. Efficient building technology makes the concept, which is designed for a long service life, fit for the future. The passive house certification promises resource-saving living with low operating costs.

The design for the project by ROBERT VOGEL GmbH & Co Kommanditgesellschaft received a commendation.

SERVICES IN DETAIL

Hybrid construction

- Timber frame construction
- Wood-concrete composite ceilings
- Timber panel construction walls
